

Snowflake Lab: Create, Load & Query

Goal: Create your first database & table, insert data, and learn basic querying – all inside the Snowflake web UI

Step 1 – Log In & Open a Worksheet

1. Go to <https://app.snowflake.com> and log in with your free trial account
2. You are now in Snowsight (the web interface)
3. Left sidebar → **Worksheets** → **+ Worksheet** (or “New Worksheet”)
→ You now have a blank SQL editor ready

Step 2 – Your Very First Snowflake Commands

Run these one by one (highlight + Ctrl+Enter or click the blue Run button):

```
SELECT 'Hello Snowflake! I am ready!' AS my_first_message;
```

```
SELECT  
  CURRENT_WAREHOUSE(),  
  CURRENT_DATABASE(),  
  CURRENT_SCHEMA(),  
  CURRENT_USER(),  
  CURRENT_TIMESTAMP();
```

You just ran real SQL in the cloud!

Step 3 – Create Your Own Database & Table

```
-- Create a database just for this lab  
CREATE OR REPLACE DATABASE BEGINNER_LAB;
```

```
-- Create a schema inside it  
CREATE OR REPLACE SCHEMA MY_DATA;
```

```
-- Switch to your new database and schema  
USE DATABASE BEGINNER_LAB;  
USE SCHEMA MY_DATA;
```

```
-- Create a simple table  
CREATE OR REPLACE TABLE TRAINEES (  
  ID INT,  
  FIRST_NAME STRING,  
  FAVORITE_COLOR STRING,
```

```
JOIN_DATE DATE  
);
```

Step 4 – Insert 5 Rows Manually

```
INSERT INTO TRAINEES VALUES  
(1, 'Alice', 'Blue', '2025-01-15'),  
(2, 'Bob', 'Green', '2025-02-20'),  
(3, 'Carol', 'Purple', '2025-03-10'),  
(4, 'David', 'Red', '2025-04-05'),  
(5, 'Eve', 'Yellow', '2025-05-01');
```

Step 5 – Query Your Data

Run each query one at a time and look at the results below the editor.

```
-- 5.1 See everything  
SELECT * FROM TRAINEES;
```

```
-- 5.2 Only names and favorite colors  
SELECT FIRST_NAME, FAVORITE_COLOR FROM TRAINEES;
```

```
-- 5.3 Who likes warm colors? (Red, Yellow, Orange)  
SELECT FIRST_NAME, FAVORITE_COLOR  
FROM TRAINEES  
WHERE FAVORITE_COLOR IN ('Red', 'Yellow', 'Orange');
```

```
-- 5.4 Create a nice badge  
SELECT  
FIRST_NAME,  
'Trainee #' || ID AS BADGE,  
FAVORITE_COLOR  
FROM TRAINEES;
```

```
-- 5.5 How many trainees do we have?  
SELECT COUNT(*) AS TOTAL_TRAINEES FROM TRAINEES;
```

```
-- 5.6 Who joined in 2025? Order by date  
SELECT FIRST_NAME, JOIN_DATE  
FROM TRAINEES  
WHERE YEAR(JOIN_DATE) = 2025  
ORDER BY JOIN_DATE;
```

```
-- 5.7 Top 3 earliest joiners  
SELECT FIRST_NAME, JOIN_DATE  
FROM TRAINEES  
ORDER BY JOIN_DATE
```

`LIMIT 3;`

Step 6

- Created a database, schema, and table
- Inserted real data
- Written 7 different SELECT queries with WHERE, ORDER BY, LIMIT, calculations, and more.

Optional Clean-Up

`DROP DATABASE IF EXISTS BEGINNER LAB;`
